AEROFOIL

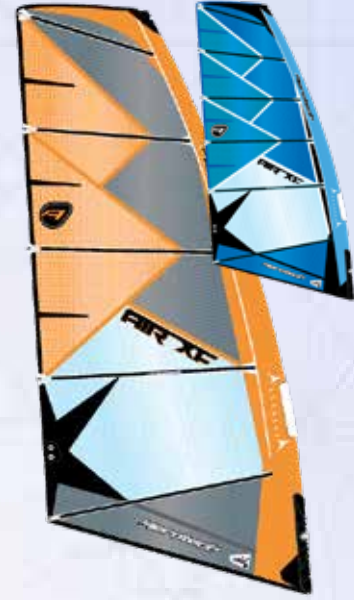

FREERIDE FOIL

AIRX

FREESTYLE/FREERIDE

AIRXF

CONCEPT:FREEFOIL

The perfect sail for the 'new wave' of windfoiling. This two cam sail has the perfect power and stability for getting up on to a foil! With Technora paneling on the leech, this is one of the lightest cambered sails on the market. This sail performs extremely well both for foiling and freeride blasting. Easy to rig with a wide range of tuning options due to the wide range of outhaul adjustment. The new Tack Strap II system makes for strong set-it-and-forget-it tuning of the tack strap. This model features a 100% grid construction for the ultimate in durability and UV resistance, raised stainless steel 6-1 pulley with oversized rollers, insignia tape reinforcing, Tack Strap II system, thermo-formed base pad, rod and tube battens, micro roller cambers, and Technora leech panels.

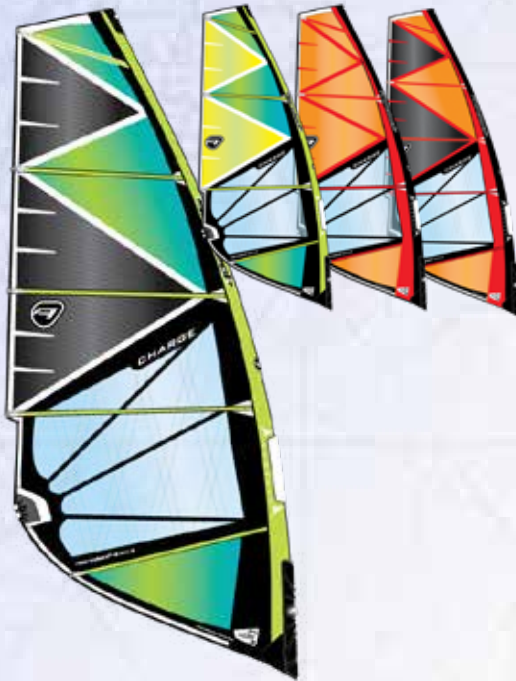

This sail bridges the gap between freestyle, freeride and power wave sailing, and are some of the lightest weight hassle-free sails available. A reinforced clew is designed to hold up even in the toughest pumping conditions, and the Dacron luff panels make it easier to rig. No more fear of crinkling while you're feeding the mast through the luff sleeve! This sail offers a lot of range on outhaul adjustment, so you can tune it for your preferred feel. It continues to be the best value in a 100% grid model. The AirX has the soft feel of the Charge, but with lots of power like the Phantom. The new Tack Strap II system that threads the tack strap through the downhaul pulley provides better tension without any inconvenience. Includes raised stainless steel 6-1 pulley with oversized rollers, insignia tape reinforcing, Tack Strap II system, thermo-formed base pad, and rod battens in all sizes except 7.7.

Windfoiling has taken over! For 2025, Aerotech brings you all the power and play of the Air X, now in a brand new no cam foil sail. The Air XF has a low foot and forward draft placement, which allows for a locked in feel and good stability, even when sheeting out in the gusts. The 100% X ply construction delivers a lightweight and durable sail, perfect for foiling. Due to the attached flow that foiling provides, Aerotech is able to design with a higher aspect ratio while still providing the low end power and top end speed you've come to expect from the original Air X.

CHARGE

SIDESHORE WAVE

This is Aerotech's down-the-line wave sail! This model has the ability to hold power when needed, but remains neutral for transitions or for wave riding. The Charge has shed weight and gained strength over the years. The clew grommets have been replaced with stainless steel rings to minimize weight, the strength lines running through the window have had Technora threads sewn into them for strength, and the upper panels on all models have been changed to a lighter weight material to keep the weight low on the sail. The Charge features a 'drop-clew' design which allows for shorter boom lengths and improved handling. This sail continues Aerotech's tradition of 100% grid construction, and lots of color gives this sail a real "look at me!" appeal. It is one of the most durable wave sails ever produced using triple throw stitch seam construction. This sail has the new Tack Strap II system that threads the tack strap through the downhaul pulley for better tension with no inconvenience. Constructed with a 100% grid, anti-chafe bumper in the head, raised stainless steel 6-1 pulley with oversized rollers, thermo-formed base pad, interactive rigging guide, rod battens, Tack Strap II system, and Technora upper panels on the larger sizes (5.8 and 6.2). The 3.5 through 5.5 have 4 battens to reduce weight and give a softer feel for improved down-the-line wave sailing. Sizes 5.8 and 6.2 have 5 battens, and upper panels made of Technora.

PHANTOM

ONSHORE WAVE

With the leech cutout just above the boom, this sail offers great handling due to the shorter boom length. This sail is a wave sail first, but due to its stability and power, it crosses over to freeride and bump-and-jump use quite well. The leading edge luff panels are Dacron to make rigging easier, without fear of crinkling the sail while feeding the mast through the luff sleeve. The Phantom's ultra durable 100% grid construction and huge range make this sail one of Aerotech's most popular models! This sail has the new Tack Strap II system that threads the tack strap through the downhaul pulley for better tension with no inconvenience. This model offers the ultimate in durability and UV resistance, anti-chafe bumper in the head, raised stainless steel 6-1 pulley with oversized rollers, thermo-formed base pad, interactive rigging guide, rod battens, and Technora upper panels on the larger sizes (5.7 to 7.5).

TORQUE

FREE SPEED

DAGGER VMG

Longboard/Touring

FREERIDE/FREERACE

LONGBOARD RACE

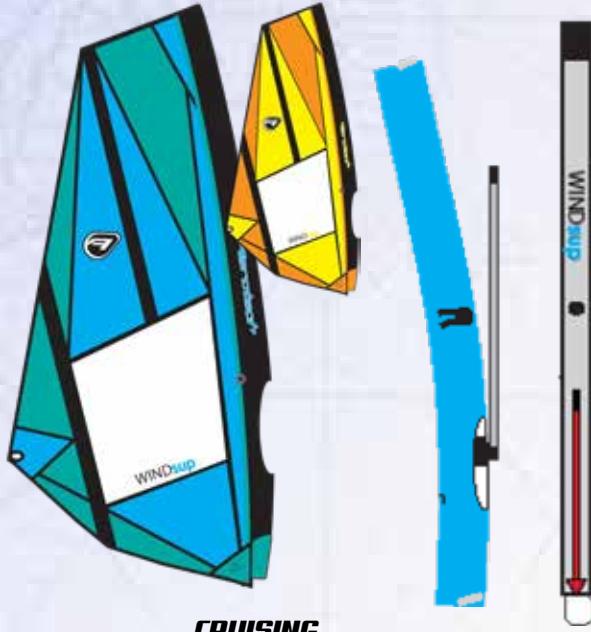

The Torque is latest new sail from Aerotech. This sail is designed for Longboard windsurfing. The Torque has longer boom a firm leech and a full shape right to the head. Under maximum downhaul the leech will open a bit extending the upper wind range. With a lot of shape forward the sail has the locked in feel like a camber sail but without the hassle of cambers. The 100% X ply construction offers great durability as well. If you are looking for a super powerful longboard sail look no further than the new Aerotech Torque.

The Free Speed is a no-cam slalom sail designed for fast freeriding and low end performance. It's built tough with Aerotech's legendary 100% grid construction and extremely powerful shape. This sail allows maximum performance in a no-cam design, with a combination of vertical and horizontal seam shaping. This provides lots of power down low and a very progressive twist pattern. It is designed for those who want to go fast with a 'no hassle' high performance feel. It has a third luff panel that gives the sail more forward pull so riders can keep their speed when exiting fast jibes. This model features a 100% grid construction for the ultimate in durability and UV resistance, anti-chafe bumper in the head, raised stainless steel 6-1 pulley with oversized rollers, thermo-formed base pad, interactive rigging guide, tube battens, and the Tack Strap II system.

The Dagger is Aerotech's longboard racing sail. This model is built of 100% grid construction with roller bearing camber inducers. With longboards making a huge comeback into the market, Aerotech has just the motor that these boards need! This sail features a full, powerful shape with firm leech tension. Moderate sleeve width and camber inducers give it maximum range and speed. Tremendous low end power from the extra curve in the foot. Thermo-formed base pad, a raised stainless steel 6-1 pulley with oversized rollers, interactive rigging guide, a mix of rod and tube battens, the Tack Strap II system, Technora top panel for reduced weight, and a slightly shorter clew.

WINDsup

CRUISING

The WindSUP is all about bringing windsurfing back to a simpler time, but with a few modern touches! The sail can go from the roof of your car to the water in under a minute. Just pull the mast bag off, fold the boom down and roll the sail out. Attach the outhaul, and you're ready to go! With vertical battens, this sail offers the convenience of keeping the sail on the mast, but still maintains a modern outline with a fat head and increased surface area below the boom. Pop this on a SUP or any longboard, and remember just how fun windsurfing can be in 5 to 10 knots of wind! Durable dacron construction with vinyl window.

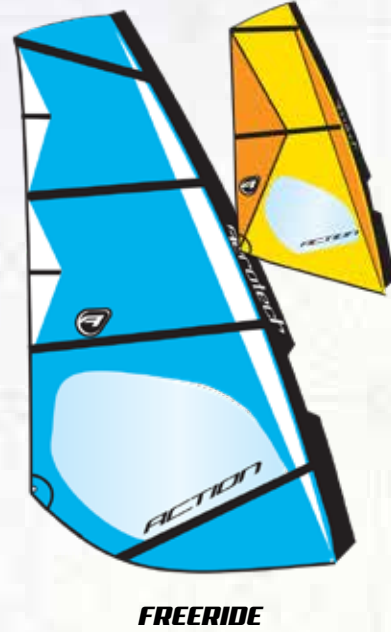

Bag rolled down for sail use only

Bag with top rolled down secured with bungee and button. This allows the bag to be used to hold the sail with the sail folded in half horizontally and rolled from clew.

- Bungee and button on sail so sail can be rolled with boom attached
- Sail size and dimensions printed on bottom of sleeve
- Bag unrolled for storage of mast and sail with boom attached
- Button on sail bag with bungee loop on back side
- Zipper on bag extends to top of boom opening so boom can stay attached to mast with sail in the bag
- Bag has double plastic zipper cars
- Pull cord at bottom of bag

Rigging instructions can be viewed at:

ACTION

FREERIDE

The Action continues as Aerotech's Dacron freeride sail! This sail is ideal when maximum durability is crucial. The all-Dacron construction and vinyl window make this sail perfect for rental and school use. With full battens and a slalom cut, this model will perform very well for your recreational customer or resort guest!

SWING RIG

MOTION

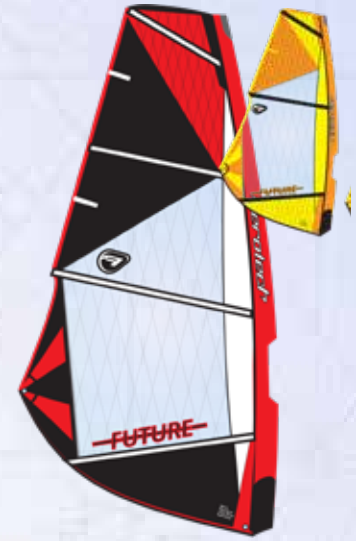

FUTURE

Entry Level

ENTRY LEVEL

YOUTH

The Swing rig is ideal for beginners and progressing in windsurfing. Light and accessible, it is suitable for all types of riders! Solid, it has been designed to withstand the constraints of club and initiation use. Delivered in its carrying bag, it is easy to train with and will suit all practitioners wishing to progress with reliable equipment.

Features full X-Ply grid construction, Easy to rig with fixed boom and 0cm extension, 3 battens, Strap tensioner on the outhaul, PVC head protector, PVC batten end protector, PVC anti-rubbing strip on lower batten pocket. Includes sail, boom, mast, base, bag, and uphaul.

The Motion is a state-of-the-art entry level sail. Both the 5.5 and 6.5 are short enough on the luff to rig on a 400cm mast, which allows the rig to feel light even with an epoxy mast! The sail is built of 100% x-ply for a lightweight and durable product, while the bright colors give the Motion a very visible look. It is available as a sail only, or complete with a rig package. Either way, the sail comes with an over sized bag that fits the entire rig.

The Future is the perfect sail for beginner to intermediate youth sailors! It has less luff curve for a softer, more responsive feel, and is brightly colored to increase visibility on the water. The Future is available as sail only or in a rig package. Both versions come complete with a rig bag that holds all the components of the rig in one easy to carry package. The Future continues with its durable lightweight all X-ply construction, 100% grid construction, raised stainless steel 6-1 pulley with oversized rollers, insignia tape reinforcing, thermo-formed base pad, and rod battens.

WINDSURFER

LONGBOARD RACE

The revival of the original windsurfing board has also brought back a revival of the original windsurfing sail! This Mylar/Dacron sail is available in a 5.7 for freeriding and racing, and a 4.5 for learning. A single head batten and two leech battens give this sail more stability and better user friendly control than the original, while still delivering loads of power, even in light winds. Rigging is easy due to a gradual luff curve. Gone are the days of the tie-on boom, as the official Windsurfer boom has a modern clamp-on head for easy and secure rigging. This is the sail that made windsurfing fun for everyone, and it's doing it all over again! The perfect sail for cruising the water on light wind days, or for getting into longboard racing with friends.

Kona

LONGBOARD RACE

The Kona is a no-cam power slalom sail. It is your best choice for a sail designed specifically for cruising on longboards, or big freeride stuff. With a tight leech and fuller shape, this model allows the rider to be powered up on a smaller sail. The reduced luff curve allows for hassle-free rigging. With a unique design, it can be tuned for non-planing conditions by setting the sail with a tight leech, or set the sail pretty floppy for the overpowering stuff. Nice and bright for maximum 'wow'! The Kona is the choice for the Kona One one-design class of racing. Constructed with monofilm, X-Ply, and rod battens.

Kites/Wings **FLOW**

A three strut kite that offers high performance at a very competitive price. The Flow is quick through the air, but predictable enough that beginners will progress quickly on it! This model also offers enough performance that even advanced riders will appreciate the smooth power and pop. Combine the Progressive Flow with one of our Progressive kite boards, and you have a high performance package at an industry leading price point.

AeroWing

The Progressive AeroWing is built using the finest Teijin ripstop, with an easy one pump system. The strut handles on both the leading edge and center strut give the rider the ultimate control. The AeroWing is sold complete in a backpack bag with a leash. Just add a board, and you are good to go!

X-Wave

Wave/Freeride

In contrast to the hollow and smooth reef breaks in side to off-shore winds, the majority of waves are beach breaks with onshore winds. Given that most of the riding involves going against the wind, with the sail obstructed by the wave itself, the shape of the Xwave is designed to sustain speed and momentum through transitions. With multiple fin and footstraps setup options, Xwaves can be customized to match a range of individual styles and sailing conditions. While initially tailored for performance in sloppy waves, the board's shape features enable riders to adjust the turn radius for when the conditions improve.

Cross

Freewave/Bump & Jump

Cross boards strike a balance between wave and freeride designs, making them the most versatile option in the lineup. These boards are specifically crafted for intermediate to advanced riders who are seeking to explore more challenging conditions. With features such as multiple footstrap options and various fin setups, riders have the flexibility to fine-tune their boards between high-wind blasting in choppy waters and more moderate wave conditions.

Breeze

Wave/Freeride

The Breeze is a wave-catching machine for extremely light winds. With its elongated shape and increased volume, the board excels in marginal conditions, quickly reaching optimal speed. The board's design allows it to effortlessly roll over the white water and into the lineup, demanding less physical efforts from the rider.

When riding the wave, the substantial size of the Breeze doesn't hinder the rider's experience. With its distinctive step tail and pronounced V-shaped bottom, the board remains responsive and maneuverable, comparable to a much shorter traditional wave board.

WindSUP

Entry Level/All Around SUP Freeride/Wave/Windfoil

The WindSUP is designed to offer three disciplines in one fun package: SUP, Windsurfing and Wind Foiling. The ideal board on which to learn how to windsurf, foil, or SUP. The trademark satep tail is integrated into the swallowtail, allowing the board to take off perfectly in SUP mode while still giving you the choice of windsurfing!

Nano

Race/Freeride Entry Level

The Nano design is shaped for beginners who are eager to advance to the next skill level. The line makes good use of its many features tailored to customize the board setup to your current level and preferred style. A true freeride design, the Nano is shaped to make progress as less technical as possible. Its volume distribution, in conjunction with the board's outline, allows sailors to swiftly get into the footstraps and not be afraid to disturb the trim of the board.

RS Slalom

Race/Freeride

The design has undergone rigorous testing and fine-tuning to ensure it meets the demanding conditions faced by riders during PWA events. The RS V5 Slalom boards are specifically engineered for advanced to expert riders and deliver exceptional speed, control, and responsiveness, allowing riders to push their limits. With their specialized designs, RS Slalom designs are finely tuned to deliver peak performance and control in their respective wind ranges.

S-Cross Carbon

Race/Freeride

S-Cross boards are tailored for riders seeking top-notch performance without the technicalities of a specialized slalom design. The design is ideal for solo blasting sessions or friendly competitions at your local spot. While designed for maximum speed, S-Cross blends it with the comfort and user-friendliness of a freeride board. When pushing its speed limits, the board maintains exceptional control, even when faced with challenging water conditions.

Magic Carpet

Foil

This is the first board that from scratch has been equally designed for foiling and fin windsurfing and therefore provides the same levels of performance in both disciplines. The outline with a wide tail adds leverage for early lift-offs with a foil and enables enhanced control with a fin. A big tail cut-out reduces the wetted surface, which results in amazing top speed with a fin and earlier lift with a foil. With its high entry rocker the Fifty provides early take-offs as well as smooth touchdowns, when foiling and adds outstanding control, when windsurfing with a fin in rough waters.

RF Foil

Slalom/Race

The new RF V4's sleek aerodynamic design, paired with its reduced volume and lighter weight, is tuned to minimize the gap between the speed you can achieve and the speed you can comfortably control through the extended flight

The PWA allows racers only one foil board size, and the RF V4 range meets this challenge with two options: the 85, a versatile foil slalom board, and the 75, designed for lighter riders and the preferred choice for high-wind Defi-style racing

Freefoil

Freeride/Freemov

A combination of deck and tail shape tweaks, along with repositioning the footstraps closer to the center, aimed at making the board fly with minimum power. The Freefoil range is particularly suitable for no-cam sail due footstraps inserts being positioned slightly closer to the center. In flight, this position makes the board less sensitive to loss of balance.

Riser

Foil

The Riser is Progressive's dedicated foil board for wind & wing foiling! Features twin A boxes that allow easy foil attachment and adjustment. A step tail is incorporated into the design which allows for easy take off. The Riser has enough volume and width so stability and flotation are not an issue, even for bigger riders! Featuring a short length, the Riser pumps extremely well with a foil or sail to increase water time.

Link

Freeride/Entry Level

With its ample volume, the Link is a forgiving design shaped to make learning fast and easy. With its excellent lateral stability, riders can focus on further honing their skills. Its length and parallel rails keep the board on course as it reaches planing. The board is designed to withstand everyday abuse usually reserved for windsurfing centers and sailing schools.

COOLRIDER

Freeride/Entry Level

Families, kids and upcoming windsurfers will appreciate the Coolrider just as much as windsurfing schools. The Coolrider does not only offer great stability, due to its large volume, but also provides control and maneuverability thanks to the relatively small rails. The Coolrider 230 version features a double deck in the tail for extra maneuverability despite the large volume. Windsurfing schools from all over the globe constantly provide our development team with their feedback, allowing us to further improve our beginner board.

Windsurfer School

Freeride/Entry Level

This model is slightly shorter, with more deck pad coverage to make this the ideal board for learning. The carry handles on the nose and tail make it easy for beginners to get the board to the water, and the added width gives plenty of stability without cutting down on the longboard-glide sensation that gets everyone hooked on the sport!

RS V5 AST 380

RS V6 Carbon 380

Kona One

Exocet

Windsurfer

Racecourse Sailing

Raceboard competition closely parallels traditional sail racing, involving up-wind starts, strategic mark roundings, and tactics influenced by wind shifts. As a specialized board, RS V5 AST 380 excels across all reaches and weather conditions. As always, speed remains a paramount factor in this classic form of racing. The RS V5 AST 380 is particularly fine-tuned for medium to ultra-light wind conditions. Since these types of conditions prevail for the majority of the calendar year, the RS V5 AST 380 can deliver a very competitive performance, where other designs struggle.

Racecourse Sailing

Raceboard competition closely parallels traditional sail racing, involving up-wind starts, strategic mark roundings, and tactics influenced by wind shifts. As a specialized board, RS V6 Carbon 380 excels across all reaches and weather conditions. As always, speed remains a paramount factor in this classic form of racing.

The RS V6 Carbon 380 stands out in the Exocet range with its extensive array of adjustable features. Whether sailors are dealing with light breezes or powerful gusts, as well as varying water conditions, having the flexibility to swiftly fine-tune and adapt your kit becomes crucial. This capability allows sailors to harness every possible advantage on the racecourse, ensuring optimal performance no matter the conditions.

Racecourse Sailing

Kona One is the One Design class of the future. With its unique design unifying the qualities of the classical race boards with the features of modern short boards, this is the board to learn, race, and master. Thanks to the long rocker line and step tail construction, this is the best board for all conditions. It has superior sub-planing conditions upwind, and thanks to the step tail, it behaves like a short board when planing, making it possible to sail even upwind on the fin with great wave performance and smooth jibing qualities. The board features a 3/4 deck pad that will stand up to the sun far better than the previous models. It also has molded-in graphics, which look sharp and improve longevity as well!

Racecourse Sailing

The Windsurfer LT is the successor to the original Windsurfer. This board is wider, lighter, and higher volume than the original, and much faster as well! The board is ideal for One Design racing, all-around cruising, entry level use, and SUP. The Windsurfer LT keeps all of the fun of the original board, but with many modern improvements like a 3/4 EVA deck, light stiff construction, a modern daggerboard, and power box.

PROGRESSIVE

PHISH

Freeride - beginner/advanced

This is a smooth freeride board designed with all conditions in mind. The Phish offers great stability and control across the water! Features a paulownia wood core and a continuous concave.

MANTA

Light wind - beginner/advanced

The Manta is a light wind board with superior upwind ability for all riders! This board was designed to be used in the low to medium wind range of any kite size. Features a flattened rocker line, continuous concave, and paulownia wood core.

2D CONSTRUCTION

A basic flat deck with no contour, just light or no camber. Basic pads, straps and fins are included with this model.

3D PRO CARBON

Higher end construction. These boards offer a three dimensional contoured deck, sturdy light carbon construction, pro pads and straps.

RISER

The Riser 4' kiteboard was designed for all around kite foiling! Beginners to seasoned foilers will find the Riser 4' to be the perfect sized board for any foil sesh. The Riser 4' has just enough volume while on the water, and the perfect size once off the water. A double concave V nose helps deflect touchdowns and softens the landing. The turned up bottom rail increases through the tail, and helps release the board from the water. This gives the nose a wider surface area to plane quicker, and the tail a reduced surface to release from the water quicker.

The A2 is the definitive All Around Stand Up Paddle Board model! This is a dedicated SUP that is ideal for surfing, SUP, and even wind due to the mast track found on both models. Longer and thinner construction enables better surfing than your standard SUP, and 3/4 EVA deck gives plenty of walking space. A closed cell EPS core board that's wrapped with 100% biaxial glass, it will stay both solid and light. **Gallery graphics subject to change.*

Enjoy your new favorite SUP, the Game Changer - a **JD Motes** designed surf machine! The Game Changer will revolutionize your game forever with incredible down-the-line drive and snappy rail-to-rail maneuverability. Responsiveness is the name of the game with this hardcore sport SUP. This is the ultimate SUP surf stick!

The Progressive OMNI is the all in one board for the masses. It strikes a perfect balance for all riders, and most ride styles and disciplines. Riders will be pleasantly surprised by the performance of the OMNI on flat water and waves alike! With two sizes from which to choose, the OMNI should be a good fit with just about any size and any level rider. The OMNI comes standard with a center carry handle, plastic center fin, bungee net, GoPro mount on the nose, and mast track for windsurfing.

The Club Thermo Sandwich Tech 10'6" is built with an EPS core, finished with a fiberglass wrap and a thermoformed thin plastic shell. This combination provides a bomb proof construction, which makes this board ideal for rentals, concessions, boats and any other tough environment!

The TST comes in both a standard SUP version with paddle, fins, and leash; And a windsurf version with a center fin box and mast track.

This is a dedicated fishing model that is ideal for the serious SUP fisherman. A displacement bow cuts through the water with minimal disturbance, allowing you to sneak up on fish even in shallow flats. The board includes an alloy frame seat which allows for the board to be paddled either like a kayak or a stand up paddle board. The deck tracks allow for attachment of unlimited accessories including a cooler, stand up bar, or rod holders. The epoxy construction has high density foam in all standing areas. The EVA deck pad and wide width make fishing easy even for larger paddlers in choppy conditions.

**Includes Framed Seat*

Inflatable SUP

WindWard

The Windward inflatable SUP is designed for either SUP or windsurf use with a mast base attachment, full length EVA deck pad, and both tail and center fin slots! The dual center fins allow for easy upwind travel and offer excellent tracking. This model can also be used for entry level windsurfing! The WindWard is built tough using dual wall construction and a high quality drop stitch.

Cruise

The Cruise 10'6 is our most affordable SUP board! Even though it is sold at a very reasonable price, it has all the features and design that offers a very rewarding SUP experience. The 6" thickness and wider width allow even larger riders the opportunity for an easy SUP experience!

FishAmo

The Fish Amo is ideal for the SUP fisherman, or anyone looking for a wide, stable platform. This model comes with multiple attachment points and rod holders for the serious angler, and can accommodate a framed chair and cooler! Double wall construction and a high quality drop stitch make this a super durable fishing platform.

Party Barge

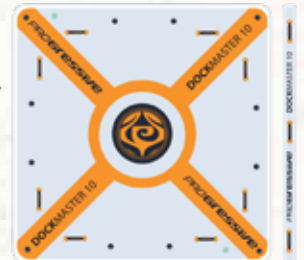

The Party Barge is one of the most versatile inflatables on the market. With a whopping 1,000 liters of volume, you can have multiple paddlers! Comes with two compact foldable chairs, Two Epic Gear convertible paddles, multiple tie down D-rings, heavy duty d-rings on the bow and stern, five mast base inserts, and two light tackle fishing rod holders. Can also be paired with WindSUP sail rigs for the ultimate in versatility for both single and tandem windsurfing! Enjoy fishing with a pal, plenty of room for your pooch or catch coolers, or a lounging platform for diving in the middle of the lake.

Air Foil

The Air Foil is a multipurpose foiling board that can be used for Wingsurfing, Wind-foiling, and SUP foiling! The stiffcarbon foil plate allows easy attachment of any 4 bolt foil plate. This inflatable board is ideal for travel, or for anyone that needs a compact, easy to transport design. Lots of flotation and a user friendly design allows for rapid improvement of rider skills! Includes center & stern carry handles, mast base insert, and full length deck pad.

DockMaster

The dock master is a 10' x 10' platform that is ideal for sun bathing, yoga, and swimming! The dock has many attachment points and a full EVA foam deck. This is the perfect item for boat use as a tow and platform, as well as a great addition to every waterfront property. Deflates for easy storage with multiple valves.

Carbon Longboard

Epoxy Glass Surfboards

The secret to the lightness in our Epoxy Glass Boards starts with a vacuum bag compressed EPS Core. A slick epoxy fiberglass 6+6oz bottom slides over waves like butter, while a rear leash plug keeps you grounded, and a nose GoPro mount allows you to record all the fun. All boards feature an EPS Core, Epoxy fiberglass 6+6oz bottom, 4+6 oz top with carbon deck layup, Vacuum bag compression layup, PVC reinforced inserts, Gore-tex vent, GoPro nose plug mount, Plenty of space for branding and stickers.

PROGRESSIVE TST Surfboards

9' TST

The Thermo Sandwich Tech (TST) is built with an EPS core, fiberglass wrap, and a thermo-formed thin plastic shell. This combination provides a bomb proof construction which makes this board ideal for rentals, concessions, boats, and any other tough environment.

Features include a Thruster fin setup, Plastic FCS fins, Classic surfboard shape, PVC reinforced inserts, EPS Core, Bomb-proof construction, Thermoformed plastic shell and branding space.

Epic Gear Masts

These are some of the highest quality masts in the world, made in Europe out of the best quality pre-preg carbon available. Due to their unique construction process, they offer a very high reflex response! These masts are what Aerotech sails are designed around, and all have a constant curve in their bends – which means they compliment all Aerotech model sails as well as many other brands that design around a constant curve perfectly!

The lower section on the SDM Race and Free Race masts have a texillium finish, which protects against abuse and sun exposure for a longer lifetime.

The RDM Wave masts have proven to be super durable, with one of the lowest warranty rates in the industry.

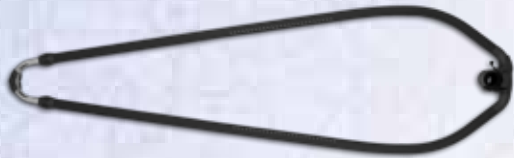

The Epoxy Composite masts are all about value and durability. The construction will stand up to the abuse of a school, and offer the first timer a super durable and affordable mast. We offer a complete line of these masts in both RDM and SDM.

**1 Year Warranty on all models. +/- 0.2kg/0.5lb on all weights.*

Epic Gear Future

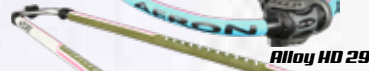

Carbon Slim Wave

Alloy SV

Alloy SL 26

Alloy HD 29

Carbon Race

Alloy OS Race

Carbon Slim Wave

Already a best seller in the market and a favorite with our team, the Carbon Slim Wave raises the bar with more functional features. The Alloy Boom Head lever has zero flex and the mast attachment is maximized. In addition to the lever, the boom tail has been widened to accommodate the latest sail profiles and preference of pro riders.

V Grip 26

The V Grip offers a double wall oval grip that allows for the stiffest boom we have ever seen. Built-in removable front shim offers a perfect fit for RDM or STD masts. Available in Carbon, Alloy, or Hybrid construction.

Alloy SL 26

(Formerly MCT26)

The Alloy range adopts a new identity with new tail profiles and alloy levers. The SL (Slim Line) adopts the features of the Carbon booms of similar length coming standard with the new Alloy Casted Lever, new forged wide profile tail ends, and new tail cleat housing for all sizes.

Alloy HD 29

(Formerly MCT29)

The HD (Heavy Duty) retains the plastic lever from last year but implements a new wider profile tail and new tail housings. The longer sizes (180+) have tapered boom arms to further maximize stiffness and durability.

Carbon Slalom / Race

The Carbon Slalom Race Range continues with the implementation of the alloy lever. The Slim 170 Slalom has been the best seller for use with the smaller sized Slalom and Freeride sails. The ergonomic slim grip has proven to be the ultimate balance for stiffness and comfort.

Alloy OS Slalom / Race

The OS Slalom and OS Race booms have been upgraded with wider profile tails, new plastic 3 pulley tail housings, and the new alloy casted lever. Ultimate strength and stiffness is achieved via the tapered boom body and the forged tail section.

*1 year warranty on all models

Viper

Dedicated Waist Harness

The Viper Waist harness is a comfortable and supportive waist harness that is built to last! The thermoformed design, primary power belt, and bar pad will pull this harness together for a tight and flexible fit. Available in black or snakeskin.

Convert

Convertible Waist/Seat Harness

The Convert harness is a great all-around harness that will convert from a seat to waist harness! The removable seat attaches internally into the waist harness using a velcro closure. Available in blue or orange.

Wing

Wingfoil Harness

A minimal harness that will help extend your sessions and point further upwind. Lightweight neoprene construction, packable and multiple leash attachment points. Comes in two sizes to fit most all riders.

Our harnesses have been designed with a no-compromise attitude to both price and performance. Whether Kiting or Windsurfing, racing or cruising, there is an Epic Gear harness for you and your needs! All Epic Gear harnesses feature a removable rear handle for use with windsurfing or kiteboarding, User friendly quick release bar, Sculpted thermo-formed lower back support, Safety knife, and storage pocket.

Day Wall Bags

These perfect and best-selling coffin-style day bags will protect your board from daily wear, tear, and dings. 6mm padded bags have solar reflective and nylon blend material on both sides along with a moisture vent to help prevent board swelling during storage and transport. Non-corrosive plastic zipper with a fin slot on both sides means quick breakdown and setup when hitting the beach! Adjustable sidewalls fit boards of different thicknesses securely, and handy shoulder strap and easy carry handles make moving between the trunk of your car and

Travel Pro Gear

This is Epic Gear's heaviest duty bag! Built to protect your board during long trips, this bag is more than ready and capable of carrying two boards, or just one with extra gear. Durable construction helps protect your boards from the dangers of travel, including careless baggage handlers. Skirt through the airport with ease with carry handles and wheels! Reinforced nose and tails are made with heavy cordura construction.

Day Wall Foil Bags

All the durability and protection you have come to know from Epic Day Wall Bags has now been designed specifically for hydrofoiling! These bags have been designed for the boxier shapes of foil boards, and include a vent to help moisture escape when the bag is fully zipped up. Exclusive to the Day Wall Foil Board Bags is a velcro fin slot that extends all the way to the edge of the bag. The fin slot can be opened so that the foil can be left on the board while it is stored in the bag, for ultimate ease of transport!

Travel Kite Golf Bag

Bigger than you think, this bag's large size will fit up to two boards and three kites. Great for traveling and just getting all the gear to and from the beach! Has easy carry handles, zippered outer pouch, and rolling wheels on a skid-resistant plate to help you roll right along.

Kite/Wake Day Bag

A great bag for one or two kite/wakeboards. Padded bag opens on the end and is reinforced on either side to prevent chipping. Comes in three different sizes to fit most kite/wakeboards on the market.

NEXT Lagoon

The Lagoon is one of the best selling kayak models in the NEXT lineup! This boat is perfect for both fishing and recreational use. Featuring multiple rod holders, aluminum framed seat and tons of storage. The framed seat keeps you dry and is easily removed to be used for a beach picnic.

The Lagoon 12' HV has a higher volume and is upgraded with removable stern wheels for easier transport to and from the launch. A more bouyant construction means no worries about tipping over, with its whopping 400lb capacity!

NEXT Pedal Fish Take Down

Pedal Fish TD 10

Pedal Fish TD 14

All the stability and tracking of a rotomolded kayak, but with the convenience and storage capabilities of an inflatable - that's what the all-new Modular Pedal Fish brings to the table! Two separately molded halves of one hull are easy to click together for a solid, stable platform, and even easier to disassemble for easier transport and storage. Includes a stern storage compartment with bungee, a stowable rudder, aluminum framed seat, in-hull storage, paddle keep, gear tracks, and a flipper-propelled pedal drive.

Suppaddles

EDGE Adjustable SUP Paddles

A lightweight, adjustable paddle with Epic Gear's patented EDGE system for more forgiveness and flexibility in the water. The unique unibody anti-twist grooved upper will keep your blade and handle in perfect sync, so you never miss a powerful stroke again! A great match for any SUP board and just about any paddler who's looking to upgrade their setup. *EDGE Integrated Paddle Guard System Patent. 10,450,0042*

Epic Gear Drive SUP Paddles

Drive paddles come equipped with a single bilateral edge to cut through water! V-Drive technology makes the bilateral edge split into a "V" shape on the blade, giving you more flat surface area for a good hearty push while still cutting through water easily with the edge still intact. Suitable for many different sized paddlers with adjustable sizing! 10K Carbon, full carbon handle, lever paddle clip.
